

LUCIFER®

Safety Shut-Off Valves for Oil Burners

**According to EN 264 Standards
121F, 121K, 121Z, 122F and
121F/Q, 321F/H Series**

Catalogue 8634/GB

Parker

Introduction

Solenoid valves fulfill important control and safety functions in modern oil firing plants. By increased requirements concerning security and economy substantial meaning is given to the selection of such control components. By the use of solenoid valves which correspond to the EN 264 standards safe operation of the plant is to be aimed at with long life expectancy and minimum maintenance. Parker Lucifer developed a specific program to launch conform valves, based again on the experience of many years in the heating-equipment. The valves are conceived according to a modular construction system. New techniques in connection with suitable material are paired meaningful with modern productions and testing methods and vouch for qualitative-high-quality products. All valves contained in this catalogue have the TUV - DIN CERTCO type certification.

Typical features and benefits

- No sensitivity to dirt with contaminated media by integrated filter
- Ruby/Viton (FKM) compound for valve disks as well as O-rings for an unusual thermal and chemical resistance.
- Compact valve dimensions, high flow rate
- Installation in any position and design adapted to an easy maintenance.
- Universal application for light -, medium- and heavy fuel oil.

Technical Data

Application	As a 2/2 electromagnetically operated safety shut-off valve and quick cut-off device in oil burner systems according to EN 264 - Tested by the German TÜV (Technical Inspection Agency) EN 264 - safety shut-off devices for burner systems using liquid combustibles and liquefied petroleum gas in the liquid phase Responsibility of German FNRS = Standards Committee for Control and Safety Devices of Gas and Oil Furnace Systems Also in conjunction with atomizing oil burners according to EN 267 and oil burners of steam boilers according to EN 411 TRD
Nominal diameter	2.5 to 15 mm
Port size	G 1/8, G 1/4, G 3/8, G 1/2 and sub-base mounting
Mounting	Direct pipe mounting or using the 2 threaded holes at the bottom mounting surface (see dimensional drawing)
Mounting position	Unrestricted
Material specifications	Brass body, internal parts from stainless steel, seat plate from ruby (in armature) and elastomers from oil resisting Viton (FKM)
Pressure range	See tables p. 6 and 8
Response time	For fuel oil EL and AC solenoids: Type 121 and 122: Switching ON ca. 15 ms Switching OFF ca. 10 ms Type 321 H: Switching ON ca. 300 ms Switching OFF ca. 50 ms Type 121 G: Switching ON ca. 50 ms Switching OFF ca. 20 ms
Media	Fuel oils EL, L, M, S (DIN 51603) as shown in tables p. 6 and 8
Filters	Valves 321 F/H must have upstream filters according to DIN 32727
Admissible media temperature	See tables p. 6 and 8
Ambient temperature	0 to 60 °C
Flow factors	Kv = 2 to 60 (see tables p. 6 and 8) Values of flow rates and flow factors are subject to ± 15% tolerance
Electrical parts	For type 121Z, 121F, 122F: Miniature coil with connector plug 2 P + E acc. to DIN 43650 type A, sealing according to DIN 40050 and IEC 529: IP 65 Ref. n°: 483764 -9W, 492425 - 14W For type 121K, 122F and 122K: High temperature coil with screw terminals Ref. n°: 483824 - 19W, 492425 - 14W For types 121F/G and 321F/H: High temperature and heavy duty coil with screw terminals Ref. n°: 483824 - 19W or 483541 - 20W
Coil housing	Epoxy coated metal housing, rotatable up to 360°, equipped with M16x1.5 cable gland, sealing to IP 44 Ref. n°: 8760.24 Zinc coated metal housing, rotatable up to 360°, equipped with M20x1.5 cable gland, sealing to IP 67 Ref. n°: 8520.23
Supply voltage	110 V/50 Hz - 115 V/60 Hz (Q9), 220 V/50 Hz - 230 V/60 Hz (2P) 230 V/50 Hz / 240 V/60 Hz (T1), 115 V/50 Hz - 120 V/60 Hz (P8)
Voltage tolerance	+10%/-15% of nominal voltage
Class of insulation material	Class F: 155 °C for coil 483764 Class H: 180 °C for coils 483824, 483541 and 492425
Solenoid duty	Continuous duty solenoid (100% ED)
Power consumption	9 to 20 Watts (see tables p. 6 and 8)

321H Type

Application:

Safety shut-off valve used as a quick cut-off devices.

Also in conjunction with atomizing oil burners according to EN 267 and oil furnaces of steam boilers according to EN TRD 411.

An upstream filter must be used.

Construction:

2/2 pilot operated, closed when de-energized.

Valve de-energized

121G/121K Type

Application:

Safety shut-off valve to use as a quick cut off device in return pipes of atomizing oil burners according to EN 267 and EN TRD 411.

According to standards, this valve must be connected in series with the flow valve (see diagrams).

Construction:

2/2 direct operated, closed by the spring's elastic force when de-energized. When the solenoid is de-energized, the liquid pressure of the return (opposite direction of arrow) will still be able to open the valve seat at 0,15 bar (1 bar for 121K3321).

Valve energized
