

WST Stopper Cylinder

Specifications

Features		
Media	Clean dry compressed air	
Operating Pressure Range	22 to 102 psi (1.5 to 7 Bar)	
Max* Pressure	145 psi (10 Bar)	
Operating Temperature Range	32 to 140°F (0 to 60°C)	
Operating Speed Range mm/s	50-500	
Cushion	Urethane Bumper	
Connecting Port	G1/8" (BSP)	
Lubrication	Sealed, lubricated for life	
Shock Absorber	WSAB2012-R	WSAB3625-C
Mounting Type	Flange	Plate
Stroke Tolerance	0-1.5mm	
Bore Size and Stroke Length		
Model	Bore Size	Stroke
WSTV(S)	50, 80	30
WSTSV(S)	50, 80	30
WSTH(S)	50	50

*The units are not designed to operate at this pressure. Exceeding the operating pressure range may cause damage to reduce the life of the unit.

Series WST Ø50mm & 80mm

How to adjust the shock absorber

The shock absorber is set to maximum damping upon delivery. When in operation, adjust the damping of the shock absorber by adjusting the control collar. For the vertical model, it's shown above. For the horizontal model, by the graduated collar.

Gradually reduce the damping level until the load comes to rest in the correct position, without any shock deceleration of the load.

If the load forces the damper to its fully retracted position too rapidly (normally apparent due to a sudden deceleration at the end of stroke), then this may lead to mechanical damage of the unit. In this case, increase the damping to remove the shock deceleration.

Periodically regulate the damping of each unit to maintain the shock absorber energy higher than the apparent load energy.

Shock absorber replacement

If correctly set, the shock absorber will operate trouble free.

Vertical type

Unfasten the head using a spanner while holding the cylinder rod in place.

Replace the shock absorber on the piston rod.

Refasten the head and readjust the shock absorber.

Horizontal type

Loosen and remove the locking collar. Remove the shock absorber and replace it.

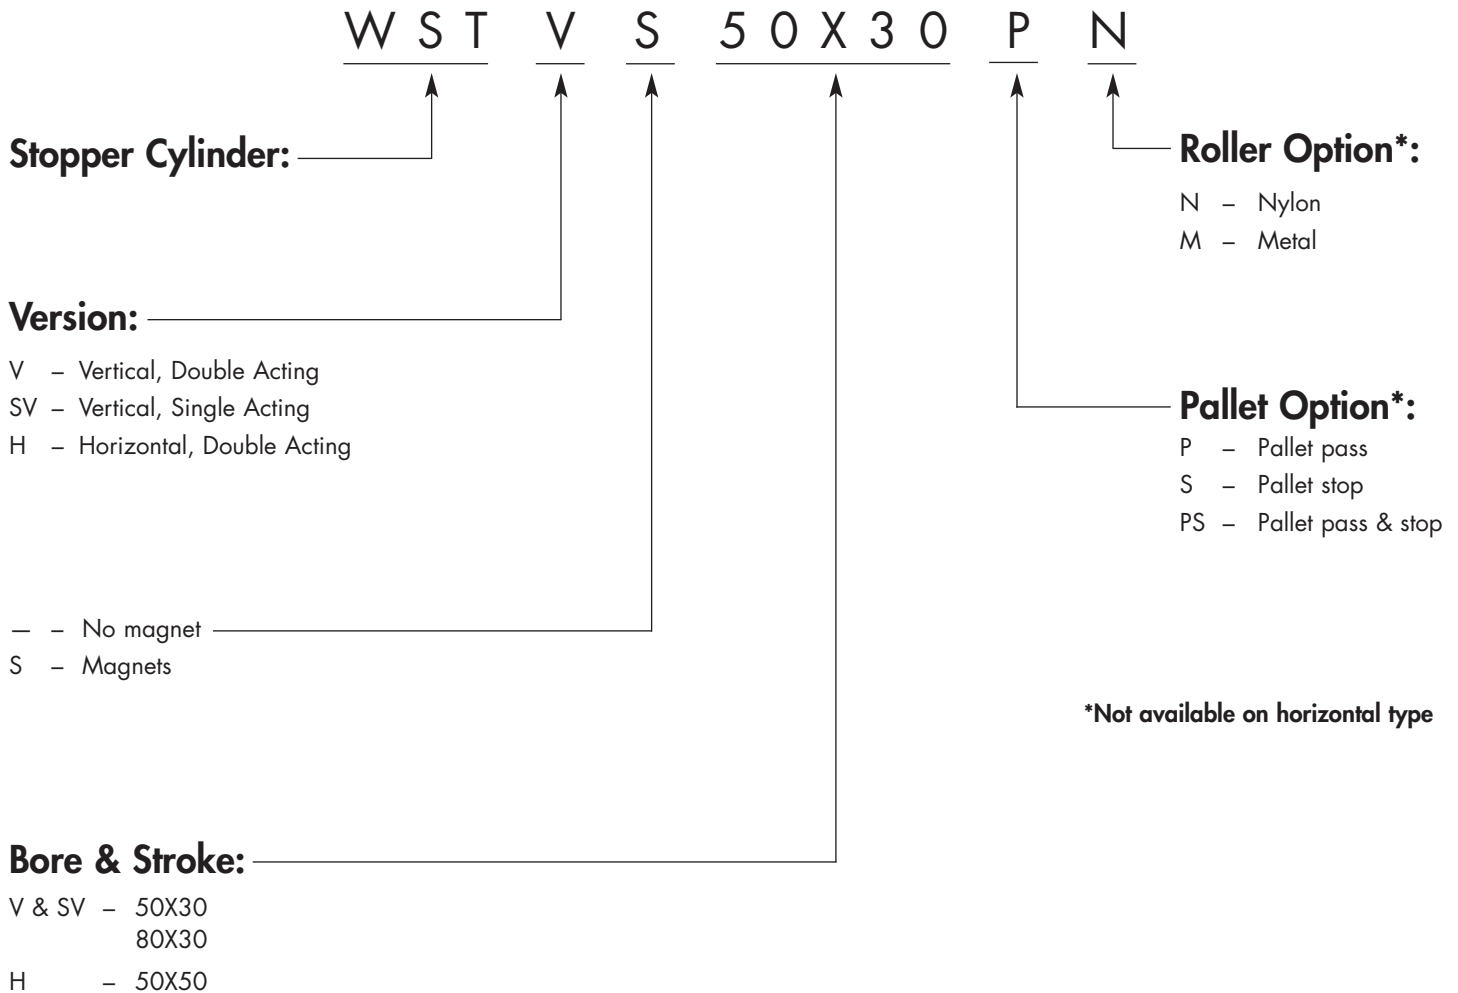

Precautions

1. Please note that if the impact energy exceeds the shock absorber energy that is currently set then the cylinder and frame will absorb the excess energy.
2. Keep all moving parts free from scratches or defects, as they may lead to defective operation.
3. The unit must be securely fastened to a fixed surface, to prevent free rotation. Any rotation may lead to incorrect operation or damage.
4. Please keep clear of all moving parts during operation.
5. The sensors are secured by a thread fixing with the mounting slots along the side of the cylinder.
To reposition a sensor:
Loosen the threaded fastener.
Slide the sensor along the groove to its new position.
Tighten the threaded fastener locking the sensor in place.

WST Stopper Cylinder

Ordering Information

Proximity Sensors

Order #	Description
WE102A/B	Reed Type, 2 wire cable, DC10-28V, AC85-115V
WE155A/B	Reed Type, 3 wire cable, LED, DC4.5V-28V
WS3HA/B	Reed Type, 2 wire cable, LED, DC10-30V (10-50mA), AC85-115V (10-50nA)
WS4HA/B	Reed Type, 2 wire cable, LED, DC10-30V (5-25mA), AC85-115V (5-20nA)
WS9HA/B	Reed Type, 3 wire cable, LED, DC4.5-28V (10-50mA)

WST Stopper Cylinder

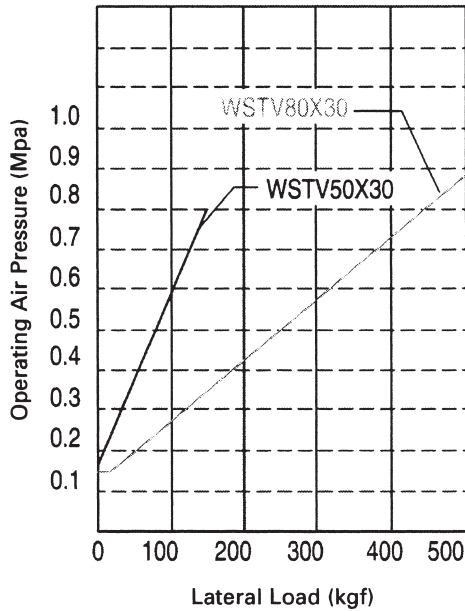

Cylinder Sizing

Type – WSTV(S), WSTSV(S)

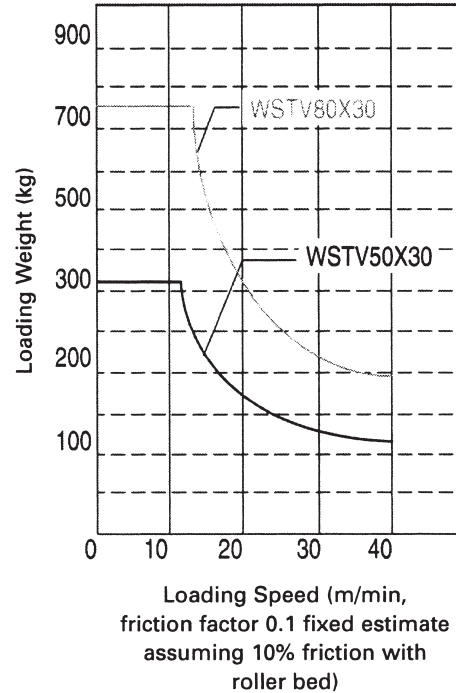

Pressure vs Load

Graph 1

Load vs Speed

Graph 2

Example for selection of stopper cylinder

Check the requirements:

1. Loading speed
2. Loading weight
3. Operating pressure

Bore size selection:

1. Select the cylinder size from Graph 2 using the loading speed and weight
2. Check the estimated operating pressure from Graph 1

For example: A load of 200kg travelling at 15m/min with an estimated friction factor of 0.1.
Cross referencing 200kg and 15m/min on Graph 2 gives a WSTV 50x30.
Checking on Graph 1 with a lateral load of $0.1 \times 200\text{kg} = 20\text{kg}$ on a WSTV 50x30.
This is below the graph line showing it to be acceptable for the application.

WST Stopper Cylinder

Cylinder Sizing

Type – WSTH(S)

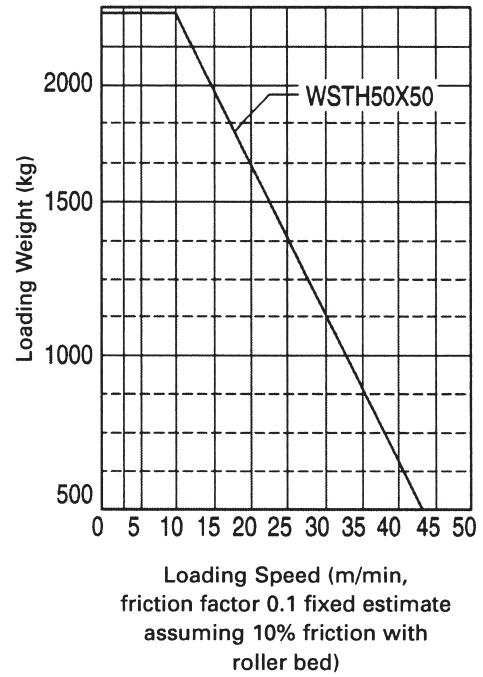

Pressure vs Load

Graph 1

Load vs Speed

Graph 2

Example

1. Specify load weight
2. Specify load speed
3. Check that it falls within the graph line

For example:
Mass of 1500kg with a speed of 20m/min is below the line making it acceptable for a WSTH 50x50

AZ Cylinder

Specifications

Features	
Type	ISO 6431 VDMA 24562 CETOP RP43P
Series	AZ
Configurations	AZ Double Acting, Single Rod, Magnetic Piston, Cushions AZD Double Acting, Double Rod, Magnetic Piston
Construction Materials	
Barrel	Extruded Aluminum, Anodized (10µ)
End Caps	Die Cast Aluminum
Piston Rod	Stainless Steel
Rod Bearing	Teflon Impregnated Bronze
Piston	Molded NBR, (Optional: Viton)
Cushions Needle	Brass
Seals	Urethane, (Optional: Viton)
End Cap Screws	Steel, zinc plated

Valve Mounting Plate Ø32-100mm

Mounting Holes:

- A = 5/2-way valve; 1/4" NPT
- B = 5/2-way valve; 1/8" NPT
- C = 3/2-way valve; 1/4" NPT
- D = 3/2-way valve; 1/8" NPT

Typical Valve Installation Using Valve Mounting Plate

Order #: PD 40372

Ordered as a separate item
 This adapter plate is used primarily to mount our S9 series valves
 Size: 1/8" or 1/4"
 Style: 3/2-way or 5/2-way

The plate may also be used for attachment of machine components or other hardware

This adapter plate can also be used with the Series SZ, SZV, NZK, NZKV, and AZV cylinders

AZ Cylinder

Single End Porting

-B2L Rear, Single End Porting Ø32-100mm

-D2L Front, Single End Porting Ø32-100mm

Single End Porting

Either the front or the rear end cap can be supplied with Single End Porting. An internal connection is made utilizing the galleries which have been extruded into the cylinder barrel.

The maximum potential speed of the cylinder in the retract (-B2L) or extend (-D2L) modes is limited due to the diameter of the cross-over hole in the barrel. See The following chart.

Deviation in speed (in./sec.) Ref. Cyl. AZ5XXX/6" Stroke (150mm)

Bore Ø	32mm	40mm	50mm	63mm
Extend				
Standard Cylinder	0.09	0.11	0.17	0.20
Single End Port	0.23	0.23	0.26	0.41
Retract				
Standard Cylinder	0.09	0.13	0.19	0.27
Single End Port	0.12	0.24	0.28	0.33
